

## **To whom it may concern**

I am writing to highly recommend Dr. Kamyar Givaki as a candidate for the Post-docs Position at IPM School of Computer Science. I came to know him during the last 7 years that I have acted as his Ph.D. supervisor. Throughout this time, I have observed his innate passion for learning and his ability to quickly grasp the essence of complex topics. This is reflected in his numerous publications in prestigious conferences and journals, such as IEEE Transactions on Computer-Aided Design of Integrated Circuits and Systems.

In addition to his academic achievements, Kamyar has also exhibited proficiency in utilizing tools and programs to bring his innovative ideas into reality. He is equipped with a good understanding of Computer Architecture related topics and is always eager to expand his knowledge in this field. As my TA in the courses "Performance Evaluation of Computer Systems" and "Data Transmission" at the University of Tehran, he consistently went above and beyond to ensure that students had a thorough understanding of the material.

Kamyar is not only a respected scholar but also a motivated individual with many talents and self-discipline. He is polite, vibrant, and has a natural ability to work well in a team. Based on his performance and academic achievements, I can rank him among the top students at the University of Tehran.

In summary, I highly support Kamyar's application to your department and under the supervision of the respected faculty members within your department am confident that he will be a valuable asset to your program. If you would like to discuss this further, please do not hesitate to contact me.
