To whom it may concern,

This is a recommendation letter for Arash Vaezi. Arash was our student and started working with me during his graduate studies. The research he did for his master's project was a novel work on the extension of the visibility polygons by converting some edges to mirrors. His paper to EuroCG'2013 was well received and got very good comments.

He became our PhD student. He has submitted an extended version to EuroCG'2017 and a good version in pregues jornal of TCS.

In collaboration with other colleagues, he has been able to submit a paper to WAL-COM 2013 and prepare two strong papers.

His research capability is excellent. He is a polite and active student. I would not hesitate to accept him as my new PhD student if he applies to our department. It is my pleasure to strongly recommend him to you.

Mohammad Ghodsi
Professor
